

temperatures, gusting winds, and falling snow to build levees along the river's banks to help protect against waters that have exceeded record levels.

College students have traveled by the busload from nearby campuses to lend a hand during their spring breaks. Students from local high schools asked if they could take time to participate. Young people have turned social networks into community networks, coordinating with one another online to figure out how best to help.

In the face of an incredible challenge, the people of these communities have rallied in support of one another. And their service isn't just inspirational, it's integral to our response. It's also a reminder of what we can achieve when Americans come together to serve their communities. All across the Nation, there are men, women, and young people who have answered that call, and millions of other who would like to. Whether it's helping to reduce the energy we use, cleaning up a neighborhood park, tutoring in a local school, or volunteering in countless other ways, individual citizens can make a big difference.

And that's why I'm so happy that legislation passed the Senate this week and the House last week to provide more opportunities for Americans to serve their communities and the coun-

try. The bipartisan Senate bill was sponsored by Senator Orrin Hatch and Senator Ted Kennedy, leaders who embody the spirit of public service, and I am looking forward to signing this important measure into law.

In facing sudden crises or more stubborn challenges, the truth is we are all in this together, as neighbors and fellow citizens. That is what brought so many to help North Dakota and Minnesota and other areas affected by this flooding. That's what draws people to volunteer in so many ways, serving our country here and on distant shores. Our thanks go out to them today, and to all who are working day and night to deal with the disaster. We send them our thoughts, our prayers, and our continued assistance in this difficult time.

Thank you.

NOTE: The address was recorded at approximately 5 p.m. on March 27 in the Blue Room at the White House for broadcast on March 28. The transcript was made available by the Office of the Press Secretary on March 27 but was embargoed for release until 6 a.m. on March 28. In his address, the President referred to Gov. John H. Hoeven III of North Dakota; Gov. M. Michael Rounds of South Dakota; and Gov. Timothy J. Pawlenty of Minnesota.

Remarks on the United States Automobile Industry *March 30, 2009*

Good morning, everybody. One of the challenges we've confronted from the beginning of this administration is what to do with the state of the struggling auto industry. In recent months, my Auto Task Force has been reviewing requests by General Motors and Chrysler for additional Government assistance, as well as plans developed by each of these companies to restructure, to modernize, and to make themselves more competitive. Our evaluation is now complete. But before I lay out what needs to be done going forward, I want to say a few words about where we are and what led us to this point.

It will come as no surprise that some Americans who have suffered most during this recess-

sion have been those in the auto industry and those working for companies that support it. Over the past year, our auto industry has shed over 400,000 jobs, not only at plants that produce cars, but at the businesses that produce the parts that go into them and the dealers that sell and repair them. More than 1 in 10 Michigan residents is out of work, the most of any State. And towns and cities across the great Midwest have watched unemployment climb higher than it's been in decades.

The pain being felt in places that rely on our auto industry is not the fault of our workers; they labor tirelessly and desperately want to see their companies succeed. It's not the fault of all the families and communities that supported

manufacturing plants throughout the generations. Rather, it's a failure of leadership—from Washington to Detroit—that led our auto companies to this point.

Year after year, decade after decade, we've seen problems papered over and tough choices kicked down the road, even as foreign competitors outpaced us. Well, we've reached the end of that road. And we as a nation cannot afford to shirk responsibility any longer. Now is the time to confront our problems head on and do what's necessary to solve them.

We cannot, and must not, and we will not let our auto industry simply vanish. This industry is like no other; it's an emblem of the American spirit, a once and future symbol of America's success. It's what helped build the middle class and sustained it throughout the 20th century. It's a source of deep pride for the generations of American workers whose hard work and imagination led to some of the finest cars the world has ever known. It's a pillar of our economy that has held up the dreams of millions of our people. And we cannot continue to excuse poor decisions. We cannot make the survival of our auto industry dependent on an unending flow of taxpayer dollars. These companies and this industry must ultimately stand on their own, not as wards of the State.

And that's why the Federal Government provided General Motors and Chrysler with emergency loans to prevent their sudden collapse at the end of last year, only on the condition that they would develop plans to restructure. In keeping with that agreement, each company has submitted a plan to restructure. But after careful analysis, we've determined that neither goes far enough to warrant the substantial new investments that these companies are requesting.

And so today I'm announcing that my administration will offer GM and Chrysler a limited additional period of time to work with creditors, unions, and other stakeholders to fundamentally restructure in a way that would justify an investment of additional taxpayer dollars. During this period they must produce plans that would give the American people

confidence in their long-term prospects for success.

Now, what we're asking for is difficult. It will require hard choices by companies. It will require unions and workers who have already made extraordinarily painful concessions to do more. It'll require creditors to recognize that they can't hold out for the prospect of endless Government bailouts. It'll have to—it will require efforts from a whole host of other stakeholders, including dealers and suppliers. Only then can we ask American taxpayers who have already put up so much of their hard-earned money to once more invest in a revitalized auto industry.

But I'm confident that if each are willing to do their part, if all of us are doing our part, then this restructuring, as painful as it will be in the short term, will mark not an end, but a new beginning for a great American industry, an auto industry that is once more out-competing the world, a 21st century auto industry that is creating new jobs, unleashing new prosperity, and manufacturing the fuel-efficient cars and trucks that will carry us towards an energy-independent future. I am absolutely committed to working with Congress and the auto companies to meet one goal: The United States of America will lead the world in building the next generation of clean cars.

And no one can deny that our auto industry has made meaningful progress in recent years, and this doesn't get talked about often enough. Some of the cars made by American workers right now are outperforming the best cars made abroad. In 2008, the North American car of the year was a GM. This year Buick tied for first place as the most reliable car in the world. Our companies are investing in breakthrough technologies that hold the promise of new vehicles that will help America end its addiction to foreign oil.

But our auto industry is not moving in the right direction fast enough to succeed in a very tough environment. So let me discuss what measures need to be taken by each of the auto companies requesting taxpayer assistance, and I'll start with General Motors.

GM has made a good-faith effort to restructure over the past several months, but

the plan that they've put forward is, in its current form, not strong enough. However, after broad consultation with a range of industry experts and financial advisers, I'm absolutely confident that GM can rise again, providing that it undergoes a fundamental restructuring. As an initial step, GM is announcing today that Rick Wagoner is stepping aside as chairman and CEO. This is not meant as a condemnation of Mr. Wagoner, who's devoted his life to this company and has had a distinguished career; rather, it's a recognition that it will take new vision and new direction to create the GM of the future.

In this context, my administration will offer General Motors adequate working capital over the next 60 days. And during this time, my team will be working closely with GM to produce a better business plan. They must ask themselves: Have they consolidated enough unprofitable brands? Have they cleaned up their balance sheets, or are they still saddled with so much debt that they can't make future investments? Above all, have they created a credible model for how not only to survive, but to succeed in this competitive global market?

Let me be clear: The United States Government has no interest in running GM; we have no intention of running GM. What we are interested in is giving GM an opportunity to finally make those much-needed changes that will let them emerge from this crisis a stronger and more competitive company.

The situation at Chrysler is more challenging. It's with deep reluctance but also a clear-eyed recognition of the facts that we've determined, after careful review, that Chrysler needs a partner to remain viable. Recently, Chrysler reached out and found what could be a potential partner, the international car company Fiat, where the current management team has executed an impressive turnaround. Fiat is prepared to transfer its cutting-edge technology to Chrysler and, after working closely with my team, has committed to building new fuel-efficient cars and engines right here in the United States. We've also secured an agreement that will ensure that Chrysler repays taxpayers for any new investments that are made before Fiat

is allowed to take a majority ownership stake in Chrysler.

Still, such a deal would require an additional investment of taxpayer dollars, and there are a number of hurdles that must be overcome to make it work. I'm committed to doing all I can to see if a deal can be struck in a way that upholds the interests of American taxpayers. And that's why we'll give Chrysler and Fiat 30 days to overcome these hurdles and reach a final agreement, and we will provide Chrysler with adequate capital to continue operating during that time. If they are able to come to a sound agreement that protects American taxpayers, we will consider lending up to \$6 billion to help their plan succeed. But if they and their stakeholders are unable to reach such an agreement, and in the absence of any other viable partnership, we will not be able to justify investing additional tax dollars to keep Chrysler in business.

Now, while Chrysler and GM are very different companies with very different paths forward, both need a fresh start to implement the restructuring plan they develop. That may mean using our bankruptcy code as a mechanism to help them restructure quickly and emerge stronger. Now, I want everybody to be clear about this. I know that when people hear the word "bankruptcy" it can be unsettling, so let me explain exactly what I mean. What I'm talking about is using our existing legal structure as a tool that, with the backing of the U.S. Government, can make it easier for General Motors and Chrysler to quickly clear away old debts that are weighing them down so that they can get back on their feet and onto a path to success, a tool that we can use even as workers staying on the job building cars that are being sold.

What I'm not talking about is a process where a company is simply broken up, sold off, and no longer exists; we're not talking about that. And what I'm not talking about is a company that's stuck in court for years, unable to get out.

So it's my hope that the steps I'm announcing today will have a salutary effect, will go a long way forward towards answering many of the questions that people have about the future of GM and Chrysler. But just in case there's still

nagging doubts, let me say it as plainly as I can: If you buy a car from Chrysler or General Motors, you will be able to get your car serviced and repaired, just like always. Your warranty will be safe. In fact, it will be safer than it's ever been, because starting today, the United States Government will stand behind your warranty.

But we must also recognize that the difficulties facing this industry are due in no small part to the weaknesses in our economy as a whole. And therefore, to support demand for auto sales during this period, I'm directing my team to take several steps.

First, we will ensure that Recovery Act funds to purchase Government cars get out as quickly as possible and work through the budget process to accelerate other Federal fleet purchases as well.

Second, we'll accelerate our efforts through the Treasury Department's Consumer and Business Lending Initiative. And we are working intensively with the auto finance companies to increase the flow of credit to both consumers and dealers.

Third, the IRS is launching a campaign to alert consumers of a new tax benefit for auto purchases made between February 16th and the end of this year. If you buy a car anytime this year, you may be able to deduct the cost of any sales and excise taxes. And this provision could save families hundreds of dollars and lead to as many as 100,000 new car sales.

Finally, several Members of Congress have proposed an even more ambitious incentive program to increase car sales while modernizing our auto fleet. And such fleet modernization programs, which provide a generous credit to consumers who turn in old, less fuel-efficient cars and purchase cleaner cars, have been successful in boosting auto sales in a number of European countries. I want to work with Congress to identify parts of the Recovery Act that could be trimmed to fund such a program and make it retroactive starting today.

Now, let there be no doubt, it will take an unprecedented effort on all our parts—from the Halls of Congress to the boardroom, from the union hall to the factory floor—to see the

auto industry through these difficult times. And I want every American to know that the path I'm laying out today is our best chance to make sure that the cars of the future are built where they've always been built—in Detroit and across the Midwest—to make America's auto industry in the 21st century what it was in the 20th century, unsurpassed around the world. The path has been chosen after consulting with other governments that are facing this crisis. We've worked closely with the Government of Canada on GM and Chrysler, as both those companies have extensive operations there. The Canadian Government has indicated its support for our approach and will be announcing their specific commitments later today.

While the steps I'm taking will have an impact on all Americans, some of our fellow citizens will be affected more than others. So I'd like to speak directly to all those men and women who work in the auto industry or live in countless communities that depend on it. Many of you have been going through tough times for longer than you care to remember. And I won't pretend that the tough times are over. I can't promise you there isn't more difficulty to come.

But what I can promise you is this: I will fight for you. You're the reason I'm here today. I got my start fighting for working families in the shadows of a shuttered steel plant. I wake up every single day asking myself what can I do to give you and working people all across this country a fair shot at the American Dream.

When a community is struck by a natural disaster, the Nation responds to put it back on its feet. While the storm that has hit our auto towns is not a tornado or a hurricane, the damage is clear, and we must likewise respond. And that's why today I'm designating a new Director of Recovery for Auto Communities and Workers to cut through the redtape and ensure that the full resources of our Federal Government are leveraged to assist the workers, communities, and regions that rely on our auto industry. Edward Montgomery, a former Deputy Labor Secretary, has agreed to serve in this role.

And together with Labor Secretary Solis and my Auto Task Force, Ed will help provide support to auto workers and their families, and open up opportunity to manufacturing communities in Michigan and Ohio and Indiana and every other State that relies on the auto industry.

They will have a strong advocate in Ed. He will direct a comprehensive effort that will help lift up the hardest hit areas by using the unprecedented levels of funding available in our Recovery Act and throughout our Government to create new manufacturing jobs and new businesses where they're needed most in your communities. And he will also lead an effort to identify new initiatives we may need to help support your communities going forward.

These efforts, as essential as they are, are not going to make everything better overnight. There are jobs that won't be saved; there are plants that may not reopen. There's little I can say that can subdue the anger or ease the frustration of all whose livelihoods hang in the balance because of failures that weren't theirs.

But there's something I want everybody to remember: Remember that it is precisely in times like these, in moments of trial and moments of hardship, that Americans rediscover

the ingenuity and resilience that makes us who we are; that made the auto industry what it once was and what it will be again; that sent those first mass-produced cars rolling off the assembly lines; that built an arsenal of democracy that propelled America to victory in the Second World War; and that powered our economic prowess in the first American century.

Because I know that if we can tap into that same ingenuity and resilience right now, if we can carry one another through this difficult time and do what must be done, then we will look back and say that this was the moment when the American auto industry shed its old ways, marched into the future, remade itself, and once more became an engine of opportunity and prosperity not only in Detroit, not only in our Midwest, but all across America.

I'm confident we can make that happen, but we've got a lot of work to do. Thank you. Thank you, everybody.

NOTE: The President spoke at 11:07 a.m. in the Grand Foyer at the White House. In his remarks, he referred to Edward B. Montgomery, dean, College of Behavioral and Social Sciences, University of Maryland.

Remarks on Signing the Omnibus Public Land Management Act of 2009 *March 30, 2009*

Well, thank you so much, Ken, for that extraordinary introduction and for the work that you and your team are undertaking at the Department of the Interior. We're going to add a little bit to your plate today as a consequence of this extraordinary piece of legislation.

I want to thank all the Members of the Legislature who helped to craft this. Many of them are on the stage here today. Obviously, I've got to single out the Speaker of the House, Nancy Pelosi, for her extraordinary leadership, but also our leader in the Senate, Harry Reid, who worked so diligently on this bill and made sure that it got done. And so please give all of these legislators a big round of applause.

If you'll indulge me, there are just a couple other people I want to acknowledge: Nancy Sutley, who is the Chair of our Council on Envi-

ronmental Quality, who is here. Where's Nancy? There she is, right in front. Jane Lubchenco, who is the Administrator of the National Oceanic and Atmospheric Administration—please, Jane. A couple of great friends from Indian nation: President Joe Shirley of Navajo Nation, who is here—go ahead, Joe, stand up; and Tribal Chairman Robert Bear, of the Duck Valley Shoshone-Paiute Tribes. Thank you so much.

It is fitting that we meet on a day like this. Winter's hardships are slowly giving way to spring and our thoughts naturally tend to turn to the outdoors. We emerge from the shelter offered by home and work and we look around, and we're reminded that the most valuable things in this life are those things that we already possess.
